Myeloma

The RNOH myeloma service

Myeloma patients with spinal implications have been treated for a long time within our spinal deformity unit. We are proud to have launched our international myeloma service, which aims to be a high quality service following the latest international guidelines in the treatment of myeloma.

The information is here as a guide for patients and professionals and will provide useful links to relevant information.

The professional pages include an online referral form and referral criteria.

The patient pages provide information on what you can expect when you are seen at the RNOH. We have outlined the pathway for you. Myeloma UK is the official organisation for myeloma where you can find further information.

Also, we explain what type of treatment you may get if your spine is affected by myeloma and how we will follow up on your treatment to ensure you get back to your normal activities.

The team

Mr Sean Molloy
Mr Sean Molloy MB BS, MRCS, MSc (orthopaedic engineering), FRCS (Orth): Consultant orthopaedic surgeon with a special interest in Myeloma and spinal deformity
