

## Professional information for myeloma

Welcome to the professionals' page. We provide a concise [pathway](#) for myeloma patients who have infiltration of the spine. Our very close working relationship between haematologist and orthopaedic spinal surgeon ensures the patient gets the right treatment at the right time.

International guidelines for the management of myeloma were written by Dr Kyriakou and Mr Molloy who are both leading this service and they are due to be published soon. Once they are published, they will be available on this webpage.

For referrals to the myeloma service at the RNOH, please visit the [Myeloma referral form](#).

You will need to complete the online referral form and return it via the referral submit button. In addition you will need to forward all relevant images via IEP.

Our myeloma co-ordinator will receive your referral, process it and inform you when the patient's appointment will be.

If you are a therapist and need information on how to treat a patient with myeloma, please contact the consultant physiotherapist (please see section with useful contacts).
